AI Usage Disclosure

Artificial intelligence tools were used as auxiliary instruments during the preparation of this thesis. In particular, they supported code development and debugging, graph production, the discovery and contextualization of relevant literature, LaTeX formatting, and linguistic and coherence checks.

They were not used to define the research question, guide the research process, interpret empirical results, evaluate the assumptions or conclusions of prior studies, or generate the final thesis text. All final content, including the analysis, interpretation, conclusions, and written exposition, remains the sole responsibility of the author.

The tools used were Consensus for literature discovery and source contextualization, ChatGPT for explanations, linguistic revision, and LaTeX-related assistance, and Claude for code-related assistance, including debugging, refactoring, and optimization.
